

Task

There are total of 6 requirements given for Online Web Shop! Study only the non-grayed requirements. Your task is to develop high-level test-cases from the requirements specification given. You should also identify any defects in requirements you can find.

Please mark start and defect detection clock times to your sheet! Finish time will be marked with the researchers when returning your papers.

Be as **accurate** and **fast** as you can.

The time you use affects the points you get (see slide)

1. To develop the high-level test cases consider the following questions:

- What inputs and outputs are presented in the related requirement?
- What are the equivalence classes of the inputs?
- What input combinations, if any, should be tested together?

2. To identify the defects in the requirements, consider that the defects can be related, but not limited, to the following issues:

- The correctness of requirements
- The completeness of requirements
- The conflicts of requirements
- The testability of requirements
